DUNKLEY Junior Cherry Pitter

The Dunkley Junior Cherry Pitter is the only machine of its kind. It is built to handle the need for custom pitting on the farm, at the Fruit Stand and for handling the harvest of small orchards.

Dunkley's Junior Cherry Pitter is a bantam-weight machine that does a heavyweight job. Compact and sturdy, it is a small version of the Dunkley pitters used in big cherry-processing plants.

It will pit either sweet or sour cherries. This trouble-free machine turns out from 300 to 350 pounds of pitted cherries an hour.

Cherries are fed into rubber pockets in the pitting cylinder by means of a feed hopper and are discharged into another hopper conveniently located to empty into plastic bags or other suitable containers.

SPECIFICATIONS
